

Flow Chart Terminology

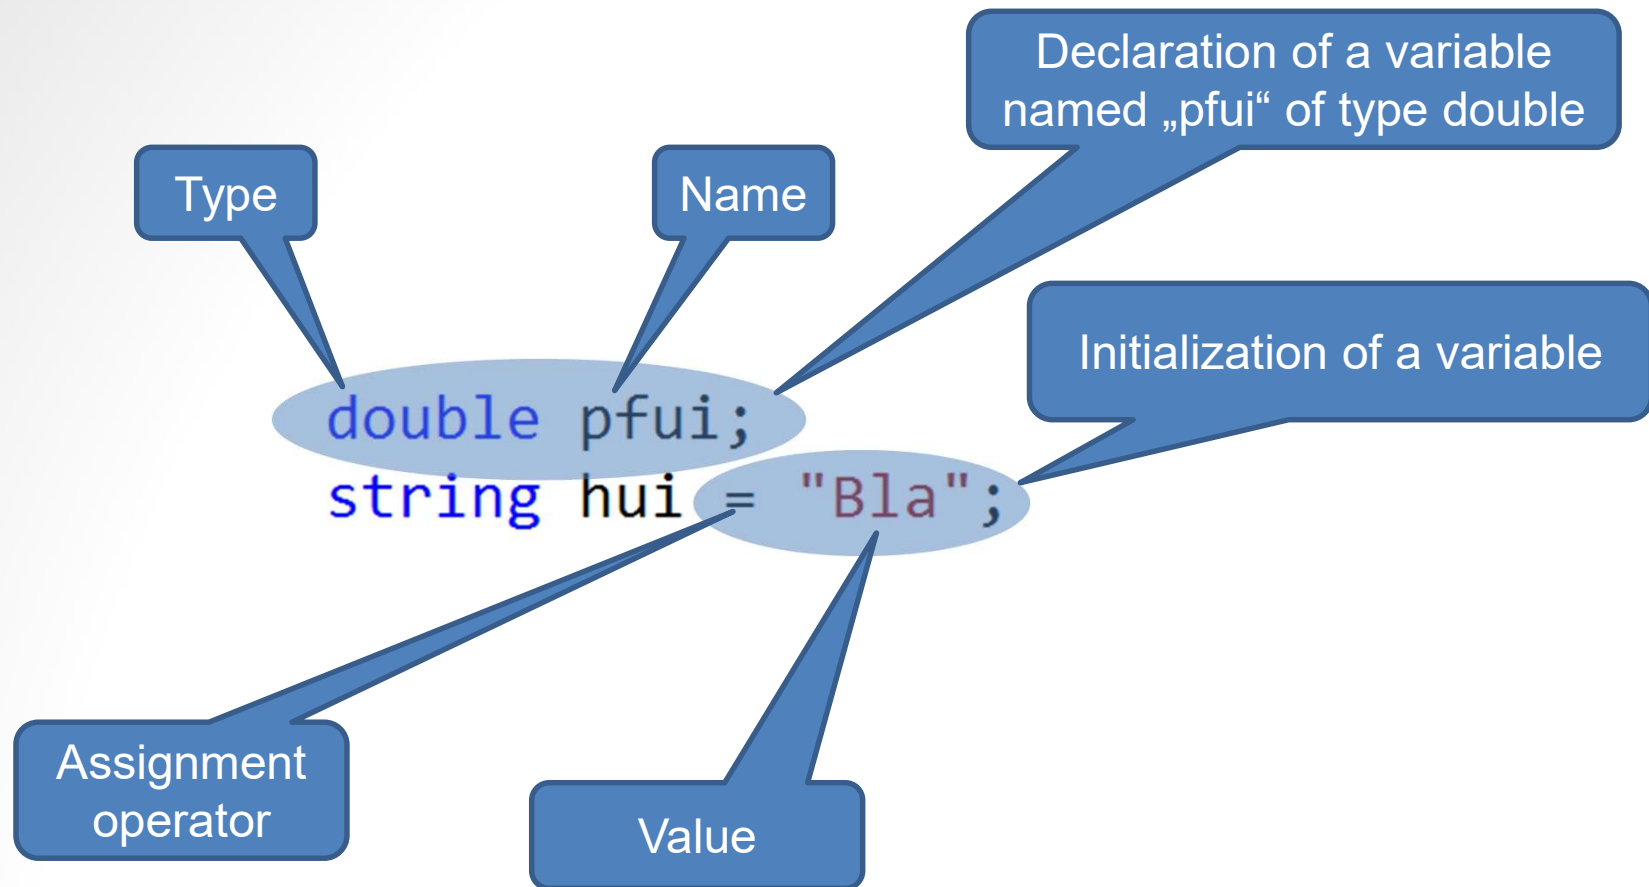

Input / Output

*Instruction
(Anweisung)*

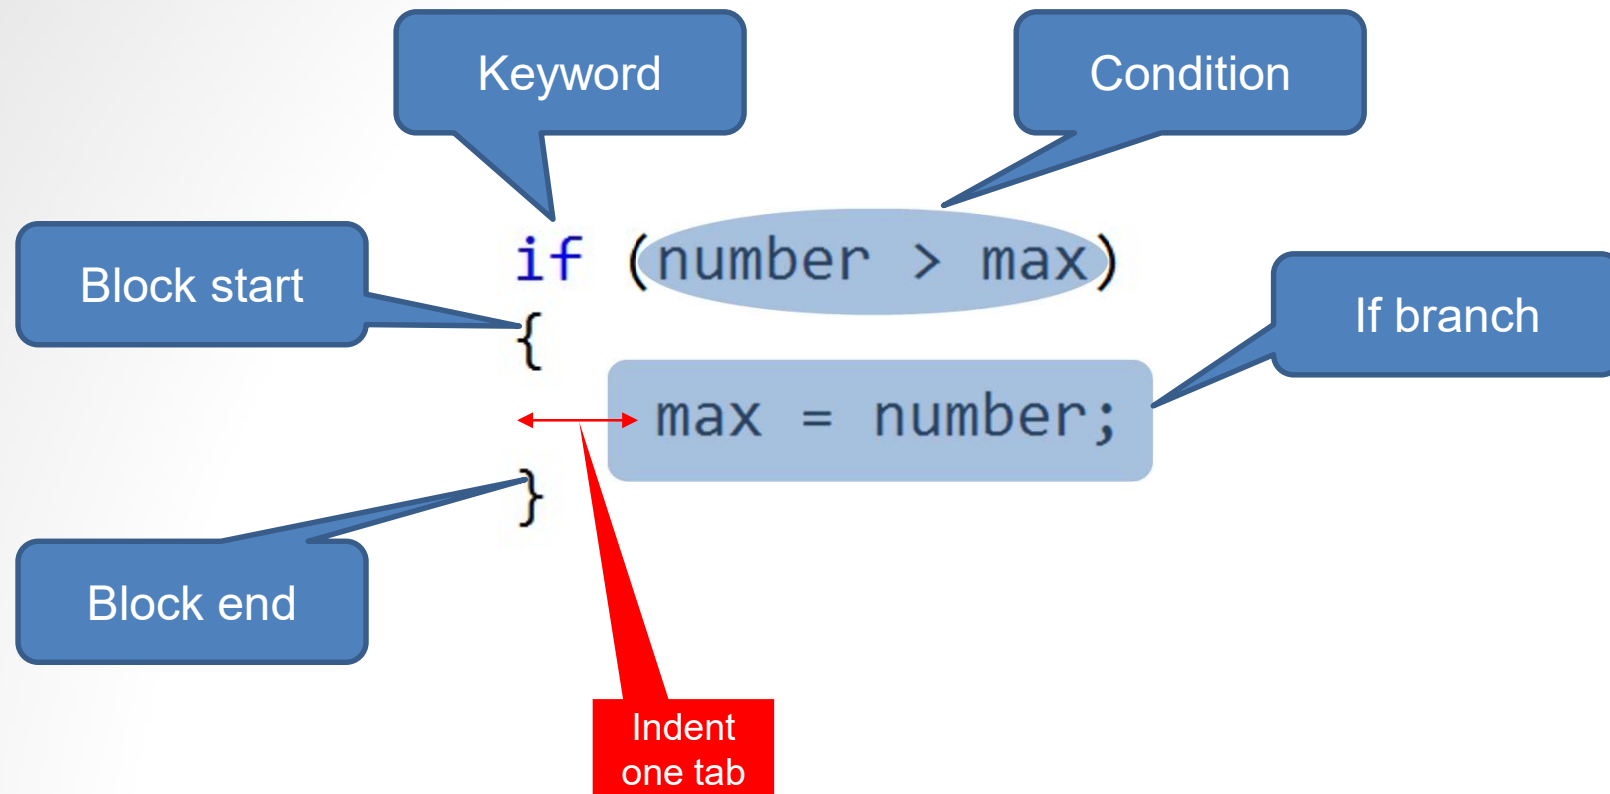

*Selection
While-Loop*

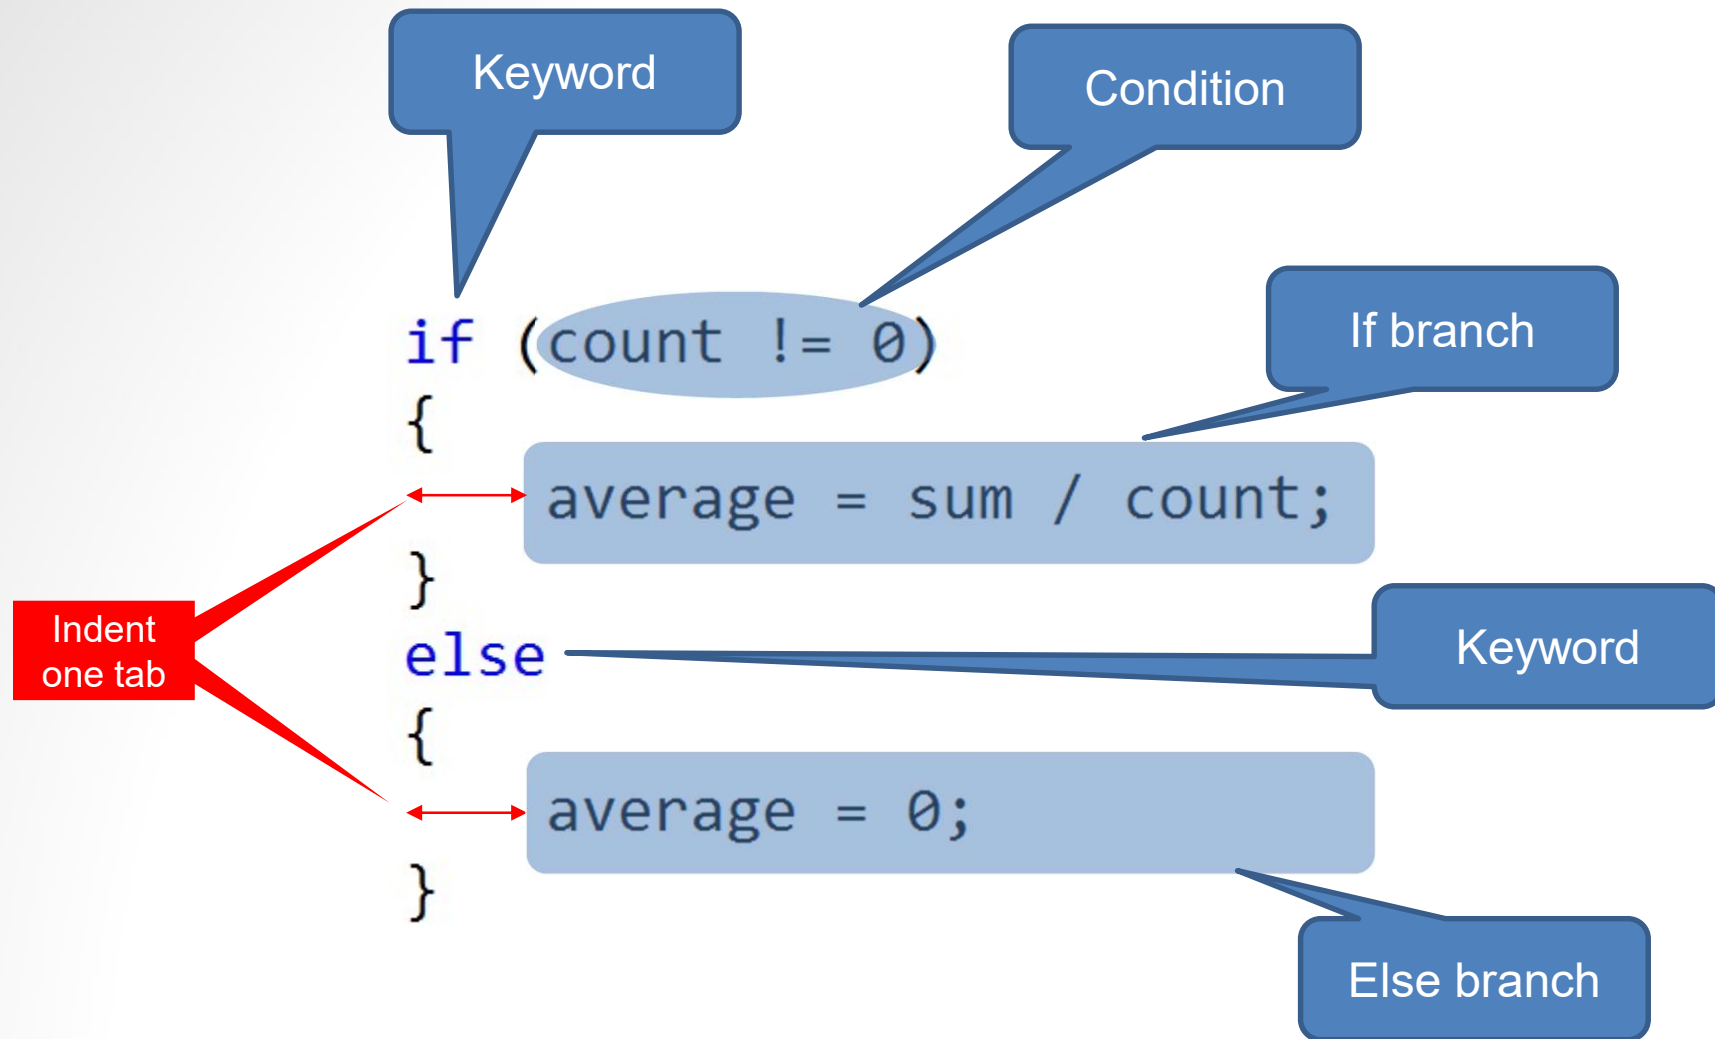

Terminology: Variable Declaration and Initialization

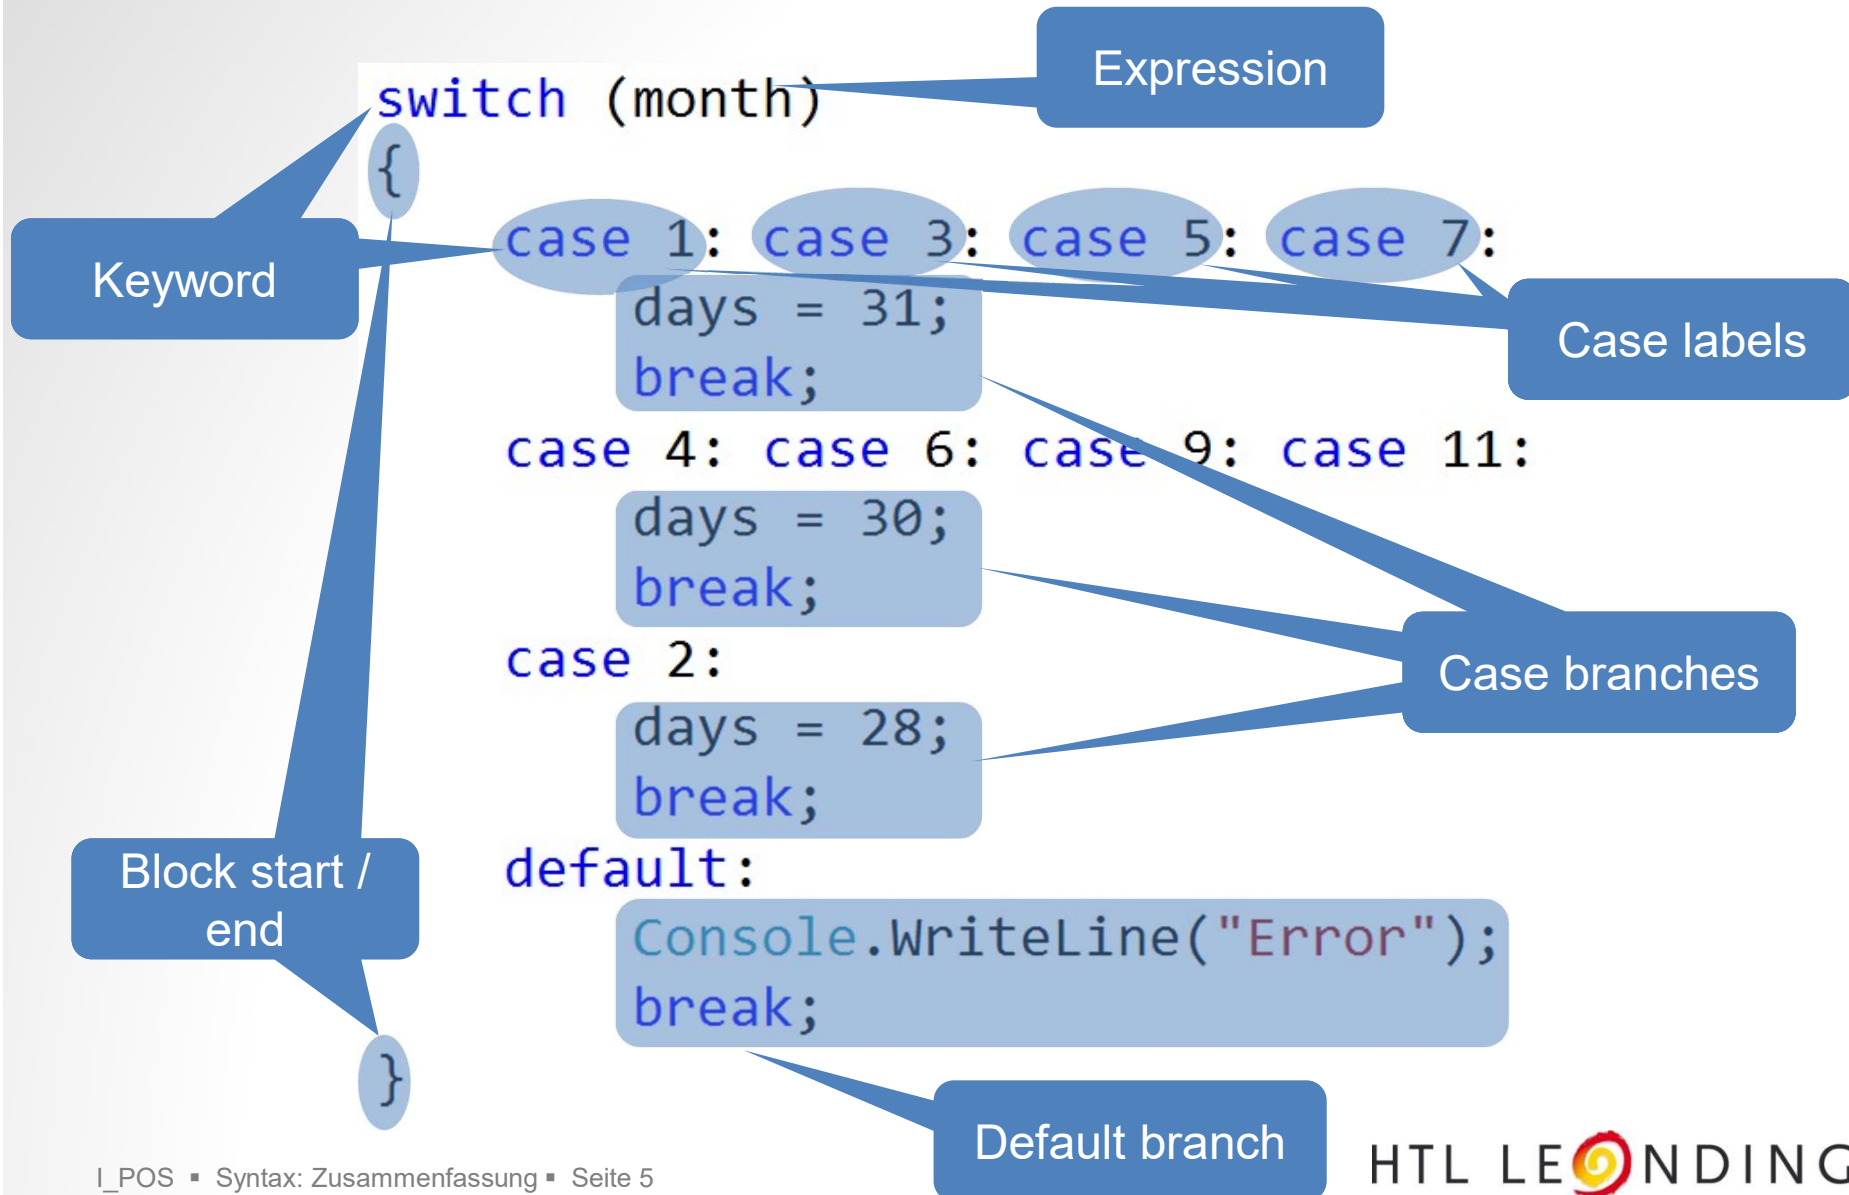

Terminology: Simple Selection

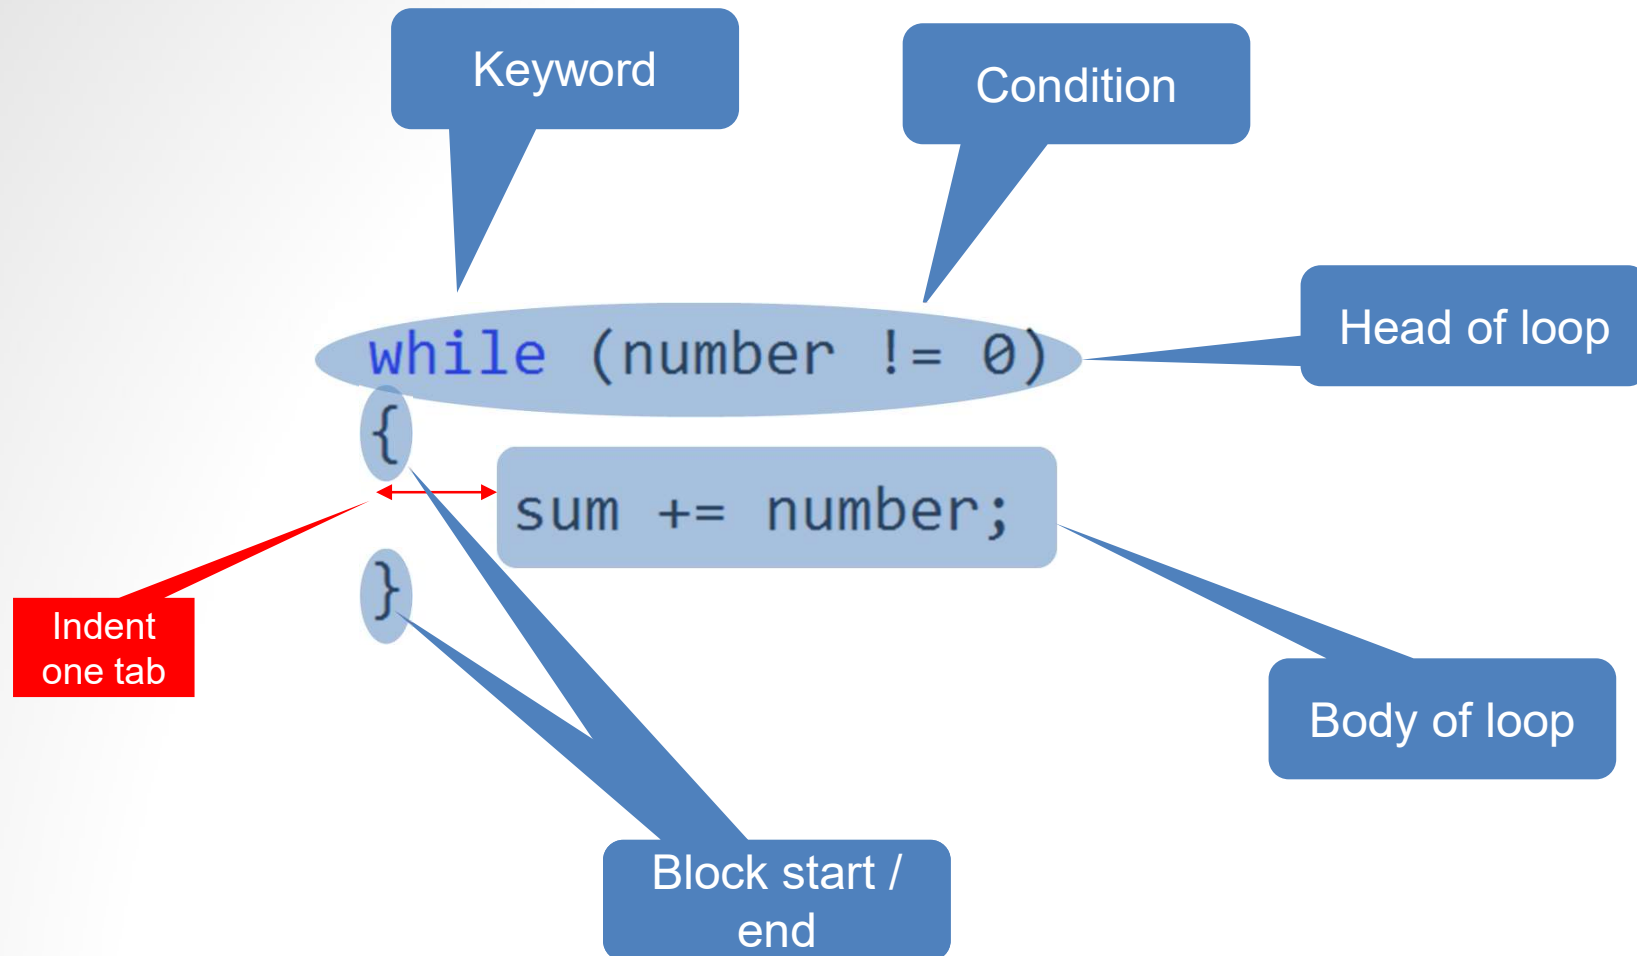

Terminology: Selection

Terminology: Switch

Terminology: While-Loop

Terminology: Do-While-Loop

Keyword

```
int number = 0;
```

Start of body of loop

```
do
```

```
{
```

Body of loop

```
    Console.WriteLine("Please enter a number ");  
    number = Convert.ToInt32(Console.ReadLine());
```

```
}
```

```
while (number != 0);
```

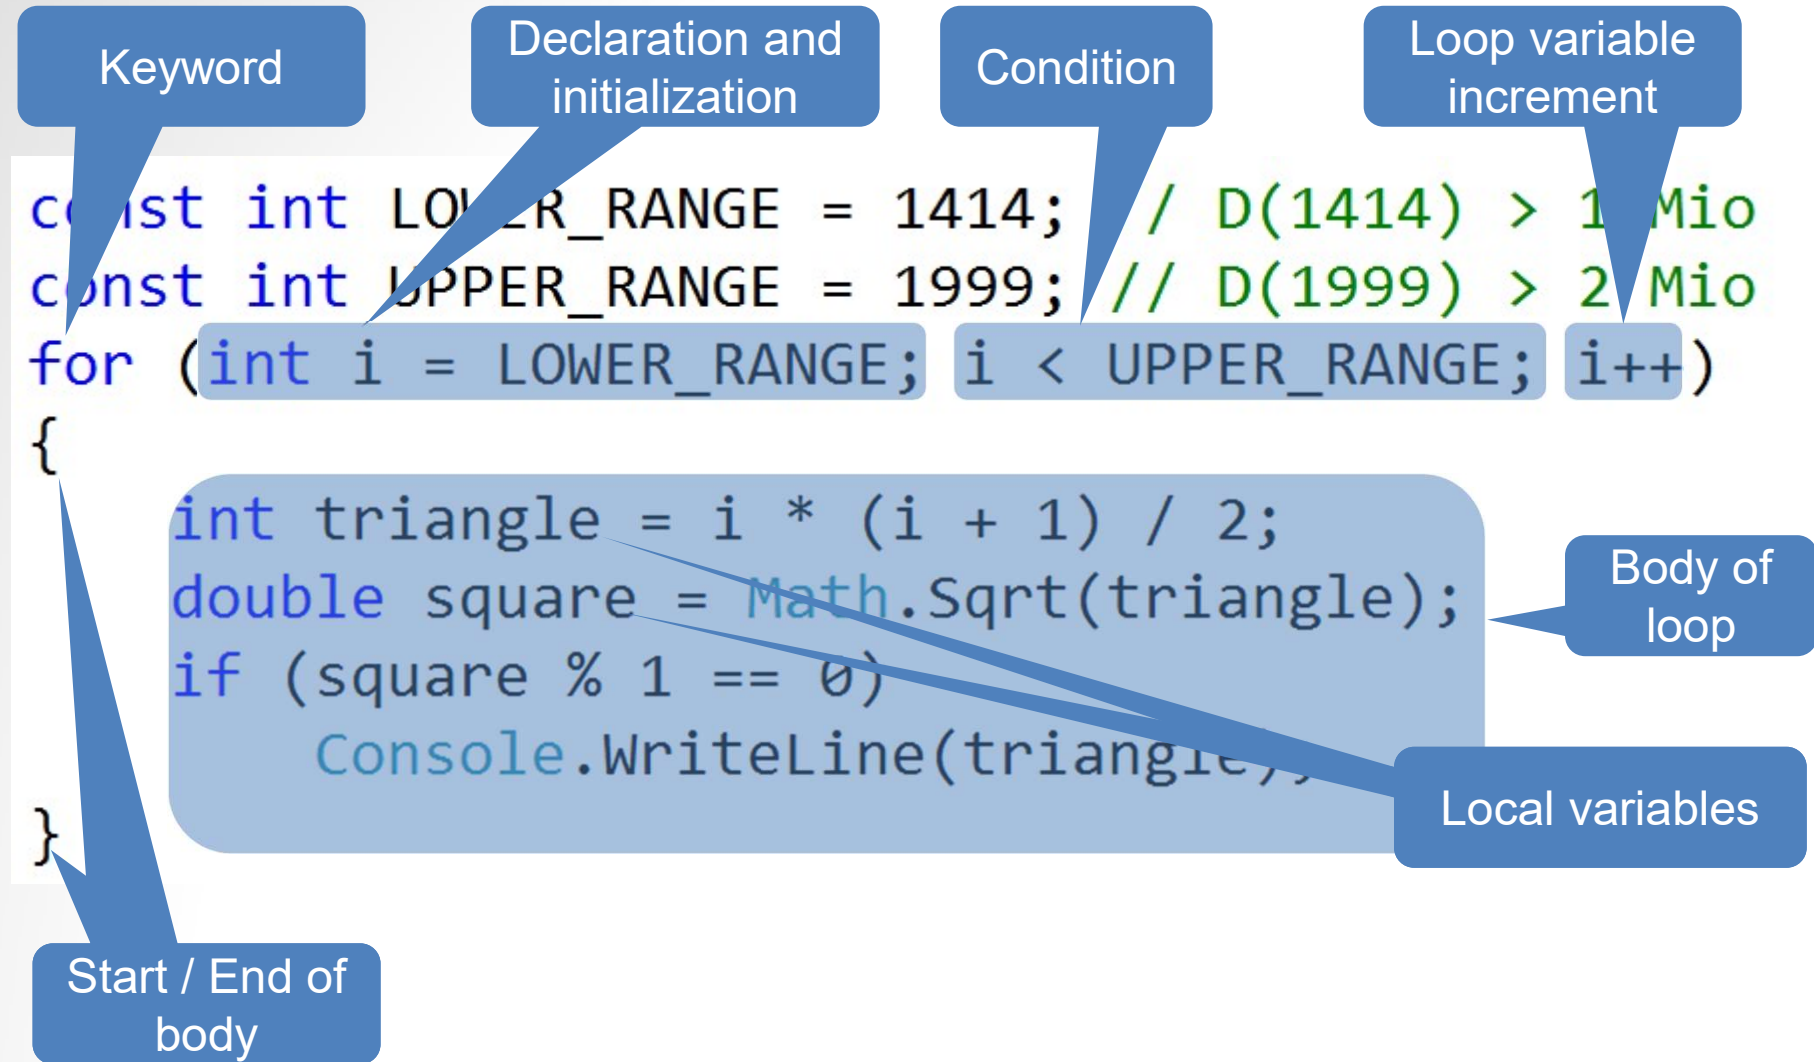

Foot of loop

End of body of loop

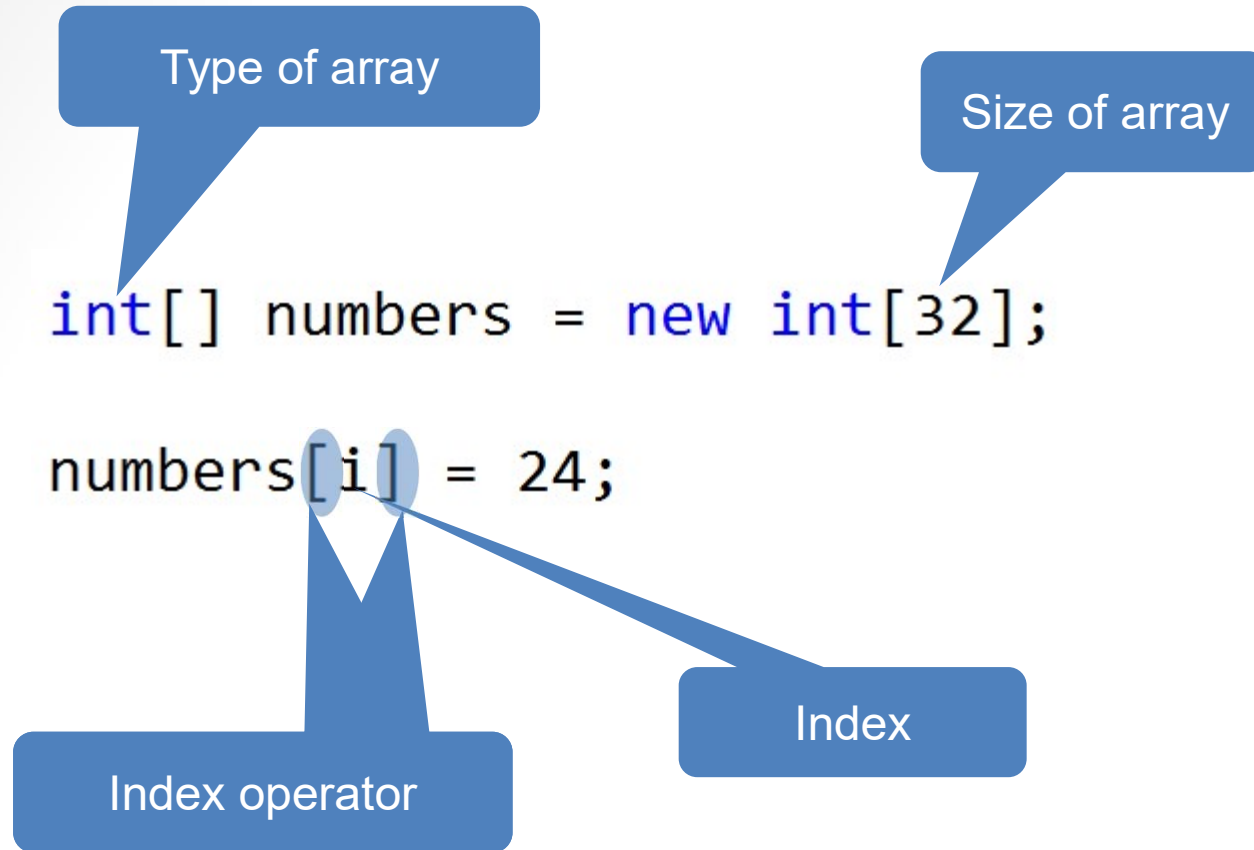

Keyword

Condition

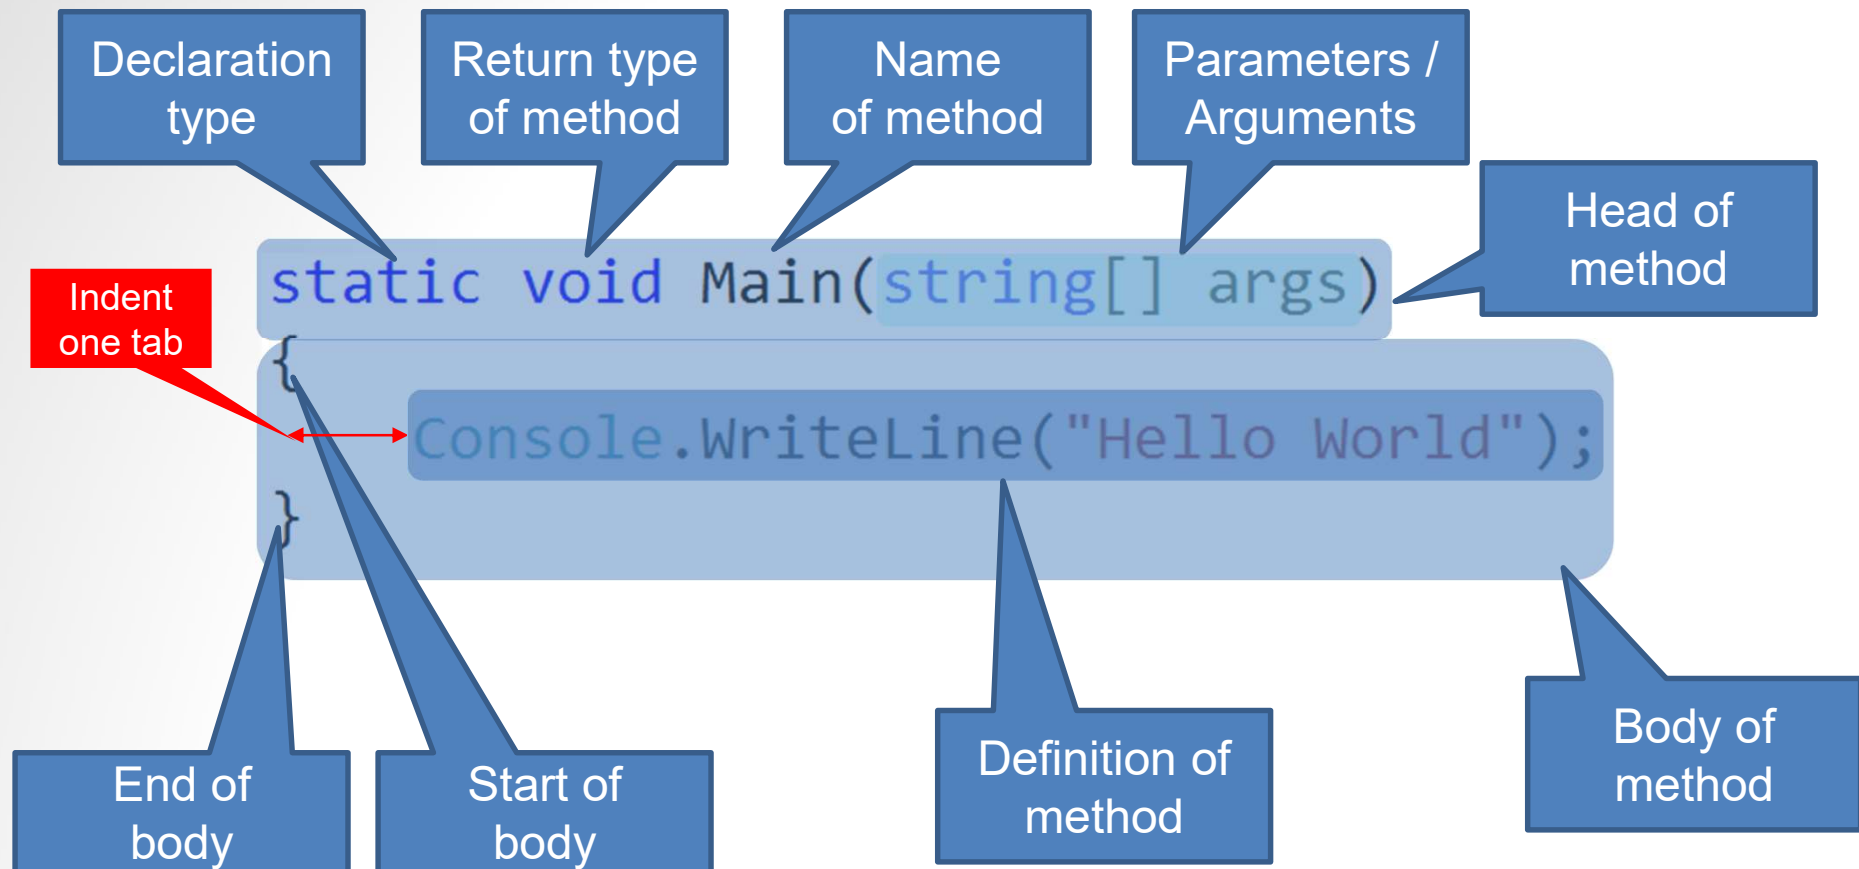

Terminology: For-Loop

Terminology: Array

Terminology: Method

Terminology: Method with Return Value

Declaration
type

Return type
of method

Name
of method

List of formal arguments /
parameters

```
static int IndexOf(string text, char searchChar)
```

Method
signature

```
{  
    int index = -1;  
    for (int i = 0; i < text.Length && index == -1; i++)  
    {  
        if (text[i] == searchChar)  
        {  
            index = i;  
        }  
    }  
    return index;  
}
```

Local variable

Return value

Method body
