

Collection: List<T>

Wichtige Properties und Funktionen der generischen Liste in .NET:

Count	Gets the number of elements actually contained in the List<T>.
Item	Gets or sets the element at the specified index.
Add(T item)	Adds an object to the end of the List<T>.
Clear()	Removes all elements from the List<T>.
Contains(T item)	Determines whether an element is in the List<T>.
IndexOf(T item)	Searches for the specified object and returns the zero-based index of the first occurrence within the entire List<T>.
Insert(int idx, T item)	Inserts an element into the List<T> at the specified index.
Remove(T item)	Removes the first occurrence of a specific object from the List<T>.
RemoveAt(int idx)	Removes the element at the specified index of the List<T>.
ToArray	Copies the elements of the List<T> to a new array.

Bsp.:

```
List<string> dinosaurs = new List<string>();

dinosaurs.Add("Tyrannosaurus");
dinosaurs.Add("Amargasaurus");
dinosaurs.Add("Mamenchisaurus");
dinosaurs.Add("Deinonychus");

Console.WriteLine();
for(int i=0; i<dinosaurs.Count; i++)
{
    Console.WriteLine(dinosaurs[i]);
}

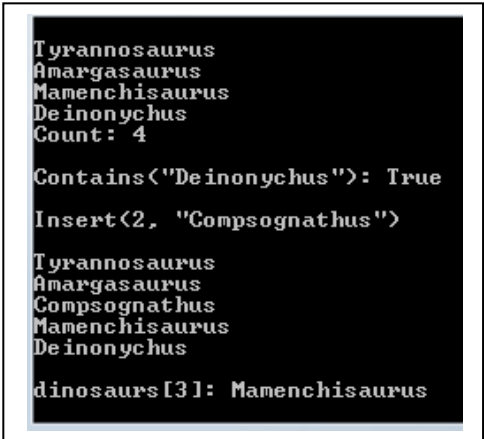

Console.WriteLine("Count: {0}", dinosaurs.Count);

Console.WriteLine("\nContains(\"Deinonychus\"): {0}",
    dinosaurs.Contains("Deinonychus"));

Console.WriteLine("\nInsert(2, \"Compsognathus\")");
dinosaurs.Insert(2, "Compsognathus");

Console.WriteLine();
for(int i=0; i<dinosaurs.Count; i++)
{
    Console.WriteLine(dinosaurs[i]);
}

Console.WriteLine("\ndinosaurs[3]: {0}", dinosaurs[3]);
```

```
Tyrannosaurus
Amargasaurus
Mamenchisaurus
Deinonychus
Count: 4

Contains("Deinonychus"): True

Insert(2, "Compsognathus")

Tyrannosaurus
Amargasaurus
Compsognathus
Mamenchisaurus
Deinonychus

dinosaurs[3]: Mamenchisaurus
```
